

Online Appendix for
**Being Ranked in a Material World: The Visual Originality of an Artwork and Its
Effects on the Artist's Canonization**

In this supplementary material we provide additional results using alternate settings for each ranking considered. A short description for each setting, variable and ranking is provided below.

Setting (Section Title):

- *Max Average Year* denotes the setting in which the focal artist maximum originality averaged through all artworks produced in a year is used for its representation.

Temporal Slicing (Section Title Suffix; if any):

- If not presented as section title suffix then no condition is applied for artworks produced in prior years.
- *(10 years)* denotes the setting in which for a focal artwork we computed the respective cosine distance to all prior artworks that were created at most 10 years before the focal artwork's creation year.
- *(20 years)* denotes the setting in which for a focal artwork we computed the respective cosine distance to all prior artworks that were created between 10 and at most 20 years before the focal artwork's creation year.
- *(50 years)* denotes the setting in which for a focal artwork we computed the respective cosine distance to all prior artworks that were created between 20 and at most 50 years before the focal artwork's creation year.
- *(100 years)* denotes the setting in which for a focal artwork we computed the respective cosine distance to all prior artworks that were created between 50 and at most 100 years before the focal artwork's creation year.
- *(More than 100 years)* denotes the setting in which for a focal artwork we computed the respective cosine distance to all prior artworks that were created at least 100 years before the focal artwork's creation year.

Dependent Variables (DVs):

The following 3 rankings in total are considered (we refer readers to the main manuscript for more details on these rankings):

1. Expert Selection System (aggregate of eBooks, Wikipedia Mentions, The New York Times, Google Ngram & Artfacts).
2. Peer Selection System.
3. Market Selection System (aggregate of Wikipedia Pageviews, Google Trends & Artprice).

Independent Variables (IVs):

- *VISUAL ORIGINALITY* denotes the maximum distance as obtained when comparing a focal artwork with prior artworks (according to the respective setting) without any stylistic movement restriction.
- *VISUAL ORIGINALITY (DOMINANT STYLE)* denotes the maximum distance as obtained when comparing a focal artwork with prior artworks according to the respective setting with style restriction (artworks that belong to the same stylistic movement as the focal artist's dominant style).

Control Variables (CVs):

- *CAREER STAGE* denotes the time period in the focal artist's career when the (setting-specific) maximum visual originality is reached (0 = career start; 1 = career end).
- *STYLE STAGE* denotes the time period in the focal artist's dominant stylistic movement when the (setting-specific) maximum visual originality is reached (0 = movement start; 1 = movement end).
- *GENDER* denotes the gender of the focal artist (male or female; binary).
- *ACTIVE YEARS* denotes the number of years between the focal artist's first and last dated artworks in WikiArt.
- *# OF STYLES* denotes the number of stylistic movements a focal artist is a member of.
- *# OF PAINTINGS* denotes the total number of paintings a focal artist has in the dataset.

Statistical Significance:

In the following tables the asterisk (*) character denotes the statistical significance for each of the IVs and CVs considered for each setting and ranking, with * denoting $p < 0.10$, ** denoting $p < 0.05$, *** denoting $p < 0.01$ and **** denoting $p < 0.001$.

Tables:

Table A1.1. shows the top 10 artists per ranking. Tables with prefix A2 show the results using the *Max Average Year* setting for each ranking.

Note. ♦ denotes Expert Selection System, ♣ Peer Selection System and ♠ Market Selection System.
